

**Compiler Design**  
**CS703**  
**Contracts: 4L**  
**Credits- 4**

## **Module I**

### **Introduction to Compiling [2L]**

Compilers, Analysis-synthesis model, The phases of the compiler, Cousins of the compiler.

### **Lexical Analysis [5L]**

The role of the lexical analyzer, Tokens, Patterns, Lexemes, Input buffering, Specifications of a token, Recognition of tokens, Finite automata, From a regular expression to an NFA, From a regular expression to NFA, From a regular expression to DFA, Design of a lexical analyzer generator (Lex).

## **Module II**

### **Syntax Analysis [12L]**

The role of a parser, Context free grammars, Writing a grammar, Top down Parsing, Non-recursive Predictive parsing (LL), Bottom up parsing, Handles, Viable prefixes, Operator precedence parsing, LR parsers (SLR, LALR), Parser generators (YACC). Error Recovery strategies for different parsing techniques.

## **Module III**

### **Type checking [3L]**

Type systems, Specification of a simple type checker, Equivalence of type expressions, Type conversions

### **Run time environments [4L]**

Source language issues (Activation trees, Control stack, scope of declaration, Binding of names), Storage organization (Subdivision of run-time memory, Activation records), Storage allocation strategies, Parameter passing (call by value, call by reference, copy restore, call by name), Symbol tables, dynamic storage allocation techniques.

## **Module IV**

### **Intermediate code generation [3L]**

Intermediate languages, Graphical representation, Three-address code, Implementation of three address statements (Quadruples, Triples, Indirect triples).

### **Code optimization [4L]**

Introduction, Basic blocks & flow graphs, Transformation of basic blocks, Dag representation of basic blocks, The principle sources of optimization, Loops in flow graph, Peephole optimization.

### **Code generations [3L]**

Issues in the design of code generator, a simple code generator, Register allocation & assignment.
